

**Technical Information Bulletin\*:  
Tamper Deterrent for the Networkfleet 3400 Product Line  
(TIB 102506)**

For customers who would like to create a visual tamper deterrent for the Networkfleet 3400 in-vehicle device, the Torque Seal product may be used to create a seal around the antenna connection of the device which would be evident if broken. Note that the Torque Seal is not "fool-proof" and that there are methods that can be used to carefully disconnect the device without evidence of tampering. Networkcar does not endorse or warranty the Torque Seal.

**How to apply the Torque Seal**

The Torque Seal should be applied externally, around the antenna ports as a visual tamper deterrent. The Torque seal **should not** be injected into the antenna port or any other area of the device so as not to interfere with the electrical components.

The Torque Seal may be purchased through Organic Products Company (<http://www.opcompany.com/index.html>).
